

SAMEER BANDI

DATA ANALYTICS ENGINEER

bsameer1995@gmail.com | 506-566-5115 | [linkedin.com/in/bsameer95](https://www.linkedin.com/in/bsameer95)

PROFESSIONAL SUMMARY

Data Analytics Engineer with 8+ years of cross-industry experience spanning healthcare analytics, supply chain management, and IT consulting. Skilled in building enterprise Power BI reporting solutions, semantic models, and DAX-driven analytics across Azure and Microsoft Fabric. Proven track record partnering with data engineering teams on Lakehouse architectures and trusted ETL pipelines, maintaining compliance with healthcare privacy legislation, and enabling self-service analytics through comprehensive data dictionaries, technical report specifications, and stakeholder training.

TECHNICAL SKILLS

Data Engineering & Architecture: Azure Data Factory (ADF), Azure Synapse Analytics, Databricks, Microsoft Fabric (Lakehouse/Data Warehouse), Azure Data Lake Storage (ADLS Gen2), Medallion Architecture, ETL/ELT Pipelines, Real-Time/Streaming Data

Languages & Databases: Python, PySpark, SQL (T-SQL), KQL (Kusto Query Language), Azure SQL Database, SQL Server, Oracle, REST APIs

Business Intelligence & Analytics: Power BI (Desktop & Service), DAX (Performance Optimization, Measures), Power Query, Semantic Data Modeling (Dimensional), Row-Level Security (RLS), SSRS, Azure Analysis Services
DevOps & Version Control: Azure DevOps, GitHub, Git, CI/CD Pipelines, Databricks Notebooks

Cloud Governance & Security: Role-Based Access Control (RBAC), Azure Monitor & Log Analytics, Data Quality & Integrity, Data Dictionaries, Cost Management, Healthcare Data Privacy Compliance

WORK EXPERIENCE

Data Analytics Engineer (DA)

August 2025 – Present

Medavie Health Services | NB, Canada

- Design, maintain, and optimize SQL Server, SSRS, and Power BI reporting solutions supporting healthcare leadership and enterprise reporting requirements.
- Develop and maintain SQL-driven datasets by consolidating data from multiple departmental sources to provide consistent and reliable reporting.
- Perform data validation, reconciliation, and quality checks across multiple sources to identify inconsistencies and improve data accuracy.
- Collaborate with IT, HR, PMO, Quality, Finance, Governance, and healthcare stakeholders to translate business requirements into reliable data and reporting solutions.
- Support healthcare leadership and governance committees by preparing SQL-driven reporting outputs and data insights for quality, finance, operational, and governance decision-making.
Analyze data requirements and develop SQL queries, reporting datasets, and analytical models aligned with stakeholder needs.
- Troubleshoot SQL, reporting, and data-related issues, performing root-cause analysis and coordinating solutions with technical and business teams.
- Support data governance and quality practices by maintaining accurate, consistent, and appropriately controlled healthcare reporting datasets.
- Work with sensitive healthcare information while following organizational requirements for data accuracy, confidentiality, security, and appropriate data handling.
- Identify opportunities to improve reporting workflows, standardize datasets, and increase reliability of recurring analytical processes.

Data Engineer

April 2022 – July 2025

Source Atlantic Limited | NB, Canada

- Architected scalable Medallion data architecture (Bronze, Silver, Gold) within Azure Data Lake Storage (ADLS Gen2) to centralize enterprise-wide inventory data, reducing overall cloud storage costs by 75%.
- Engineered robust ETL data pipelines utilizing Azure Data Factory (ADF) and SQL to extract, orchestrate, and ingest distributed relational data, cutting data processing and ingestion costs by 50%.
- Developed distributed data processing workflows using PySpark and Databricks Notebooks to execute large-scale data cleansing and transformations for the silver layer.
- Designed predictive analysis models utilizing PySpark within Databricks to forecast branch inventory trends and optimize regional stock distribution.
- Implemented a high-performance cloud data warehouse using Azure Synapse Analytics to host the curated gold layer, significantly optimizing downstream query execution.
- Built comprehensive tabular data models and wrote advanced DAX measures in Power BI to track complex supply chain metrics, KPIs, and historical stock fluctuations.
- Developed and deployed an enterprise Power BI dashboard via Power BI Service, eliminating hours of data lag to deliver near real-time inventory insights.
- Enforced strict data governance and cloud security by configuring Role-Based Access Control (RBAC) across the Azure ecosystem to manage administrative data access.
- Configured Row-Level Security (RLS) within Power BI data models, ensuring branch managers and regional staff only accessed authorized, location-specific data.
- Orchestrated CI/CD pipelines and version control using GitHub and Azure DevOps to securely manage pipeline code, track Databricks notebooks, and streamline deployment life cycles.
- Collaborated with stakeholders to gather requirements, define solution architectures, and ensure robust, medallion pattern data architecture aligned with organizational goals and compliance needs.
- As a BA Elicited requirements directly from business stakeholders and translated business questions into Power BI reporting and BI solutions spanning SQL, KQL, and Fabric data sources.
- Created and managed dimensional data models to support analytics, reporting, and business intelligence needs.
- Designed and developed Power BI reports and dashboards, including complex DAX calculations and measures, tailored to specific stakeholder requirements.
- Managed Power BI Desktop and Power BI Service deployment, including automation of cloud updates.

Power BI Developer/Analytics Engineer (Internship)

October 2021 – December 2021

New Brunswick Energy and Utilities Board | NB, Canada

- Developed dynamic Power BI dashboards to conduct complex economic analysis on motor fuel gas stations, visualizing metrics critical to provincial supply continuity.
- Engineered data transformation workflows using Power Query and advanced Excel to ingest, clean, and model raw economic data into structured relational models.
- Wrote custom DAX measures and KPIs to track fuel supply trends, pricing fluctuations, and regional distribution for regulatory stakeholders.
- Translated complex economic data into intuitive visual reports, enabling faster, data-driven decision-making for provincial utility analysts.

Associate Consultant

2017 – 2020

Hitachi Solutions India Pvt. Ltd.

- Engineered enterprise Power BI dashboards and semantic datasets, utilizing advanced visualization techniques (bookmarks, multi-level slicing, drill-throughs) to translate complex requirements into actionable business insights.
- Designed and maintained robust tabular data models, writing complex DAX measures to optimize reporting performance and support enterprise-wide business intelligence needs.
- Integrated KQL-based Log Analytics queries with Azure Monitor to establish automated, data-driven alerting systems, significantly reducing system downtime.

- Conducted comprehensive requirement-gathering sessions with cross-functional stakeholders to document technical specifications and ensure reporting alignment with business objectives.

EDUCATION

Master of Business Administration University of New Brunswick	2021
Bachelor of Computer Science GITAM University	2017

CERTIFICATIONS

- Microsoft Certified: Azure Fundamentals (AZ-900)
- Microsoft Architect Technologies (AZ-300)
